⚠ Data Quality & Anomalies Report

Fixed $50,000 Sales Adjustments

11 records (0.11%) across **4 unique orders** contain artificially capped sales values of exactly $50,000. These span all three product categories: **Furniture (5)**, **Office Supplies (5)**, and **Technology (1)**. Geographically concentrated in the **West (7)** and **South (4)** regions. Affected sub-categories include Tables (2 instances), Bookcases, Chairs, Labels, Storage, Furnishings, Art, Phones, Binders, and Appliances.

These records inflate total revenue by **$550,000** (from $2,285,729 to $2,835,729), but contribute only $120.26 to profit, indicating they are likely data entry caps or system overrides rather than genuine transactions.

Extreme Single-Order Losses

1 catastrophic loss event was identified: Order **CA-2020-108196** in the **Machines** sub-category (East region) posted a **-$6,599.98** loss at a **70% discount**.

Beyond this extreme outlier, **12 sub-categories operate at a net loss**. The worst offenders are **Binders (-$38,510)**, **Tables (-$32,412)**, and **Machines (-$30,119)**. These categories collectively drain **$186,199** from the bottom line, representing 65% of total gross losses.

↘ Margin Leakage Deep Dive: The Discount-Profit Death Spiral

The Critical Threshold: 21%+ Discount

Orders discounted at **21% or more generate negative average profit**. The inflection point is stark: below 20% discount, average profit per order is **+$24.74**; at 21-30%, it flips to

-$45.68. At 41-50% discount, each order loses an average of **-$298.70**.

Highest-Risk Categories

Binders carry the highest average discount at **37.2%** and are the #1 loss leader (-$38,510). **Machines** average **30.6%** discount (-$30,119). **Tables** at **26.1%** (-$32,412). These three categories are the primary margin bleed points and should be the first targets for pricing reform.

The Revenue Illusion

High-discount orders (30%+) generate **-$97.18 avg profit** per transaction, while low-discount orders (under 10%) earn **+$66.90**. The company is effectively **paying customers to take inventory** in loss categories. Total net profit of $286,397 represents only a **10.1% margin** on gross revenue, well below the industry benchmark of 15-20% for retail.

Actionable Executive Recommendations

1 **PRICING: Enforce Discount Guardrails**

Implement a **hard 20% discount ceiling** on Binders, Tables, and Machines, the three categories where discounts consistently produce net losses.

Require manager approval for any discount above 15% on Furniture items.

Expected impact: Eliminating discounts above 20% on loss categories could recover **$60,000-$80,000** annually in margin.

2 **SUPPLY CHAIN: Optimize Regional Fulfillment**

Standard Class shipping averages **5.0 days** across all regions with minimal variance. Investigate whether this meets SLA commitments.

Same Day shipping shows near-zero delay (0.0-0.1 days), confirming reliability. Expand Same Day availability in the **Central region** where it currently has the lowest adoption.

Negotiate carrier contracts for the Central region, which shows the longest Standard Class delays (4.99 days).

3 INVENTORY: Rationalize Loss-Making SKUs

Conduct a full SKU-level profitability audit on **Tables** and **Bookcases** (Furniture). These sub-categories lose money even at moderate discount levels, suggesting cost-of-goods issues.

Consider **discontinuing or repricing** the bottom 5 loss-making sub-categories: Binders, Tables, Machines, Bookcases, and Chairs (combined loss: -$123,000).

Reallocate shelf space and marketing budget toward **Copiers (+$55,618)**, **Phones (+$44,516)**, and **Accessories (+$41,937)**, which have the strongest margins.

4 CUSTOMER TIERING: Segment-Based Incentive Programs

Consumer segment drives 58.4% of revenue ($1,652,792) and 46.8% of profit. Develop a loyalty program to increase repeat purchase frequency and reduce discount dependency.

Corporate segment contributes 26.6% of revenue but 32.1% of profit, indicating higher-margin transactions. Expand B2B sales outreach and volume pricing tiers.

Home Office is the smallest segment (15.1% revenue) but maintains healthy margins. Target with premium product bundles to increase average order value.
